The Art of Streamlined E-Commerce: Dropshipping is a way of selling products online without needing to keep them in stock. When an order is received, the seller sends it to another company who ships the product straight to the customer. The seller is a middleman between the customer and the company with the product. This streamlined approach to order fulfillment means you can start a business without having to lease warehouse space, juggle supply chains, or manage inventory. Ahead, you'll learn everything there is to know about dropshipping, from how it works to benefits, and how to start your own dropshipping business today. <https://blogmall.gumroad.com/l/dropship>
