. Rear-End Accidents in Dangerous Weather: Rear-End Accidents in Dangerous Weather  
Rain, fog, snow, and ice appreciably increase the threat of rear-end crashes. These climate situations lessen visibility, make roads slippery, and gradual braking response. In a horrific climate, drivers ought to modify their pace and following distance to stay safe. A driving force who fails to conform to those situations can be held accountable for any ensuing crash. Injuries from climate-associated rear-end injuries are frequently greater intense because of decreased control and longer stopping distances. Using headlights, keeping brakes, and decreasing pace are vital precautions in a destructive climate. Courts bear in mind climate as a factor, however now no longer an excuse.
